

How to view Quicktime Movies

Apple Mac – Will play automatically.

Windows XP / Vista - Newer machines should play the videos automatically. If not, you will be required to download Quicktime (<http://www.apple.com/quicktime>) and install in on your system. Once the Quicktime has been installed, restart your web browser and log on to Abi & Joseph's website. If you are using Internet Explorer, it will ask you if you would like to make "Active X" active. Press the space bar to activate "Active X". The video should now work.
